Key Type config list or string

list or string

list or string

list or string

list or dictionary

list of (strings or tuples of strings)

string

switch

name

inputs

outputs

option\_key

option\_value

specified from the root of the configuration.

Indicates any keys that should evaluate to True for this NodeBlock to be active. A list of lists of strings indicates multiple switches that must all be True to run, and is currently only an option if config is set to "None".

Indicates the nested keys (starting at the nested key indicated by config) that should configure this

Description

NodeBlock.

Table 1

metadata for the outputs' respective sidecars.

Indicates values for which this NodeBlock should be active.

Indicates the nested keys in a C-PAC pipeline configuration should configure a NodeBlock built

from this function. If config is set to "None", then all other configuration-related entities must be

ResourcePool keys indicating files generated or updated by the NodeBlock, optionally including

Used in the graph and logging to identify the NodeBlock and its component nodes.

ResourcePool keys indicating files needed for the NodeBlock's functionality.
