Table 1 Kev Type Description list or string Indicates the nested keys in a C-PAC pipeline configuration should configure a NodeBlock built from this config function. If config is set to "None", then all other configuration-related entities must be specified from the root of the configuration. Indicates any keys that should evaluate to True for this NodeBlock to be active. A list of lists of strings switch list or string indicates multiple switches that must all be True to run, and is currently only an option if config is set to "None". Indicates the nested keys (starting at the nested key indicated by config) that should configure this option_key list or string

Indicates values for which this NodeBlock should be active.

for the outputs' respective sidecars.

Used in the graph and logging to identify the NodeBlock and its component nodes.

ResourcePool keys indicating files generated or updated by the NodeBlock, optionally including metadata

ResourcePool kevs indicating files needed for the NodeBlock's functionality.

NodeBlock.
